Muhammad Moeez Raza

Senior Software Engineer | Full Stack Developer
Rawalpindi, Punjab, Pakistan

Summary

Full Stack Developer | Software Engineer #I am a results-driven Full Stack Developer with 4+ years of experience creating scalable, high-performance, and user-friendly web applications. My strength lies in blending clean UI design with robust back-end systems, delivering end-to-end solutions that make an impact. What I bring to the table:# Expertise in React.js, Next.js, Node.js, MongoDB, PostgreSQL & SQL# Full-cycle development — from requirements gathering to deployment & optimization# Hands-on experience with real-time systems, API integrations & Figma-to-React conversions# Strong focus on performance optimization, responsive design & seamless user experience# Certified in Harvard’s CS50 & multiple HackerRank Software Engineering credentials Career Highlights:At ELYSIUM SOLS, led projects improving system performance & scaling web apps with modern stacks.At AXONTICK, delivered high-performance front-end solutions, optimized load times, and integrated APIs for smoother UX.Built solutions like real-time monitoring systems, Trade Locker API integrations, and advanced data-driven apps. Passion & Vision:I’m passionate about solving problems with code, pushing the limits of web technologies, and creating digital solutions that delight users and empower businesses. Always eager to learn, innovate, and collaborate. Let’s connect and build something extraordinary together.

Experience

Software Academy Uk
Full Stack Engineer
April 2026 - Present (5 months)
United Kingdom

Develop and maintain internal business systems using Knack, Make.com, JavaScript, CSS, HTML, APIs and webhooks.

Build automated workflows connecting WordPress, Knack, Thinkific, Zoom and email systems to reduce manual administrative work.
Develop systems for managing student and parent records, enquiries, staff contracts, staff availability, enrolments and internal operational processes.
Create and improve contract management workflows, including contract changes, version tracking, previous/current contract handling, expiry processes and automated notifications.
Build webhook-based processes that capture form submissions, create records and update existing data across connected systems.
Implement record matching, conditional logic, data validation and field visibility rules to improve data accuracy and system usability.
Automate enrolment and course-related processes, including Thinkific user lookups, enrolment checks, course mapping and account monitoring.
Work with operational data to support payment, churn, retention and enrolment analysis.
Troubleshoot and resolve issues involving JavaScript, CSS, integrations, automation workflows and database relationships.
Analyse existing administrative processes and create technical solutions that improve efficiency, reduce repetitive tasks and make internal systems easier for staff to use.

Latingles

1 year

Lead Full Stack Developer

September 2025 - Present (1 year)

United States

• Led the development of scalable web applications from design to production, ensuring high-quality outcomes.
• Transformed Figma UI designs into maintainable applications utilizing HTML/CSS, PHP, and jQuery.
• Provided expert consultation and leadership to enhance the technical skills of the development team.
• Integrated backend systems with APIs and databases for seamless functionality on the Moodle platform.

Team Lead

December 2025 - Present (9 months)

Led frontend development using modern JavaScript frameworks and component-based architecture. Oversaw implementation of scalable UI features and ensured performance and code quality standards. Worked closely

with stakeholders to translate business requirements into technical solutions. Managed integrations with APIs and backend services to support frontend features.
